PROFESSIONAL SUMMARY

Junior Full-Stack Developer with over a year of production experience as part of a six-person engineering team at Durban University of Technology. Focused on React, TypeScript, Node.js and PostgreSQL, with hands-on experience building and maintaining business applications across payroll, biometric attendance, event ticketing and fleet logistics, obtained a Bachelor of Information and Communications Technology at DUT.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Dart

Frontend: React 19, Vite, TanStack React Query, Zustand, Tailwind CSS, MUI, Framer Motion

Mobile: Flutter, Riverpod, GoRouter

Backend: Node.js, Express.js, Flask, REST APIs, WebSockets, Socket.io, JWT, RBAC

Databases: PostgreSQL, Prisma ORM, Firebase Firestore, Supabase

Cloud & Backend Services: AWS S3, Firebase Auth, Supabase Auth, Docker

Testing & Tools: Git/GitHub, Vitest, Jest, React Testing Library, Postman

Integrations: Paystack, Google Gemini, OpenCV, IoT device integration

PROFESSIONAL EXPERIENCE

Durban University of Technology — Durban, South Africa

Junior Full-Stack Developer — Internal & Client Systems | June 2025 – Present

One of six full-stack developers on DUT's internal engineering team, building business systems and client-facing applications across payroll, biometric attendance, event ticketing, fleet logistics, pharmacy operations and mobile sales analytics. The systems below were developed within this role, with ownership level indicated for each project.

PayITSmart — Payroll & Employee Management Platform [\(Live\)](#)

Lead Full-Stack Developer

- Led development of a payroll and employee management platform, coordinating contributions from teammates and reviewing their code, for a platform live for 21 employees on hourly/monthly pay cycles.
- Designed the PostgreSQL schema and Prisma data layer, and implemented WebSocket-based real-time updates across the platform.
- Integrated live biometric attendance data to automatically calculate hourly pay, and consolidated inventory/reservation data into operational KPI dashboards.

Biometrics24-7 — Biometric Attendance & Fingerprint Tracking Platform [\(Live\)](#)

Sole Full-Stack Developer

- Built a real-time biometric attendance platform end-to-end, integrating fingerprint scanner hardware via IoT device communication.
- Implemented WebSocket-powered live attendance monitoring and reporting dashboards, plus secure biometric enrollment and verification workflows.
- Designed a dual-mode deployment supporting standalone operation or integration with PayITSmart, where live attendance data feeds directly into payroll calculations; deployed across 7 companies.

BuzzTicket — Event Management & Ticketing Platform [\(Live\)](#)

Lead & Sole Full-Stack Developer

- Independently architected and built an event booking and ticketing platform, including QR-based ticket generation and validation. Deployed to production.

- Integrated Paystack subaccounts to automatically split ticket revenue between organisers and the platform.
- Built event analytics dashboards and integrated AWS S3 for secure media and file storage.

WhizzFleet — Fleet & Logistics Management Platform

Full-Stack Developer

- Deployed to production, managing live truck and load operations for a fleet client. Built the Assign module's load-lifecycle tracking (Create → In Progress → POD & Complete), with an editable-timestamp correction flow and cross-field ordering validation.
- Built a driver/fleet reassignment workflow with conflict detection and server-side role-based authorization (Director vs. Controller).
- Diagnosed and fixed a React Query cache-key mismatch that was causing stale real-time alert counts across independently owned modules.

AwehPay — Sales Tracking & Business Analytics (Mobile)

Full-Stack Feature Developer

- Built sales tracking and analytics for a Flutter POS app: real-time sale recording using Firestore atomic counters for consistent totals under concurrent writes, a best-seller/slowest-seller ranking algorithm, and a business insights dashboard. Published on Google Play.

MediIntel — Pharmacy Management System

Full-Stack Developer (team project)

- Contributed stock-receiving, multi-branch transfer and prescription-processing workflows, plus audit logging for compliance reporting.

SELECTED PROJECTS

GovGuide SA — AI-Powered Government Services Platform

- Built a personal project helping South African citizens navigate government processes, starting with NSFAS; PostgreSQL full-text search handles most queries without an AI call.
- Built an AI-powered document checker and rejection-letter analyser using Google Gemini vision, and implemented Supabase Auth with row-level security to keep uploaded documents scoped privately per user.

AI Learning Adventure — AI Literacy Learning Game

TopCoder Rapid Application Development Challenge

- Built a 10-mission AI-literacy platform (56 quiz questions, 30 flashcards, XP/badge progression) with a full admin CMS for content management.
- Built a provider-agnostic AI tutor (Groq, Gemini, Ollama, OpenAI) with a zero-config mock-mode fallback, covered by a 76-test suite spanning AI routing, state stores and component rendering.

Facial Recognition Attendance System

- Built a role-based facial recognition attendance system in Python/Flask with real-time webcam processing and automated attendance tracking.

EDUCATION

Bachelor of Information and Communications Technology — Durban University of Technology (Feb 2023 – June 2026)

CERTIFICATIONS

AWS Lambda Foundations — Amazon Web Services — 2025

Amazon API Gateway for Serverless Applications — Amazon Web Services — 2025

Get Connected — Cisco Networking Academy — 2024

NDG Linux Unhatched — Cisco Networking Academy — 2024
